Our Goal

We focus on the sensing technologies of intelligent vehicle.

We want to develop an intelligent vehicle of **Omni-directional** eyes looking at the environment of both static and dynamic objects.

We want to **detect** the **moving objects** in the surroundings, and **track** their **states**, such as speed, direction, and size, so that dangerous situations can be predicted.

We want to **generate a 3D copy** of the dynamic urban scenery that contains both stationary objects, e.g. buildings, trees, road etc., and mobile objects, e.g. people, bicycles and cars.

Key Issues

- **Sensor Alignment**
- **Localization**
- **3D Mapping**
- **Mobile objects' detection, tracking and classification**

Framework

Positioning sensors

GPS, IMU

SLAM with MODT

Environmental sensors

**Laser Scanners
Cameras**

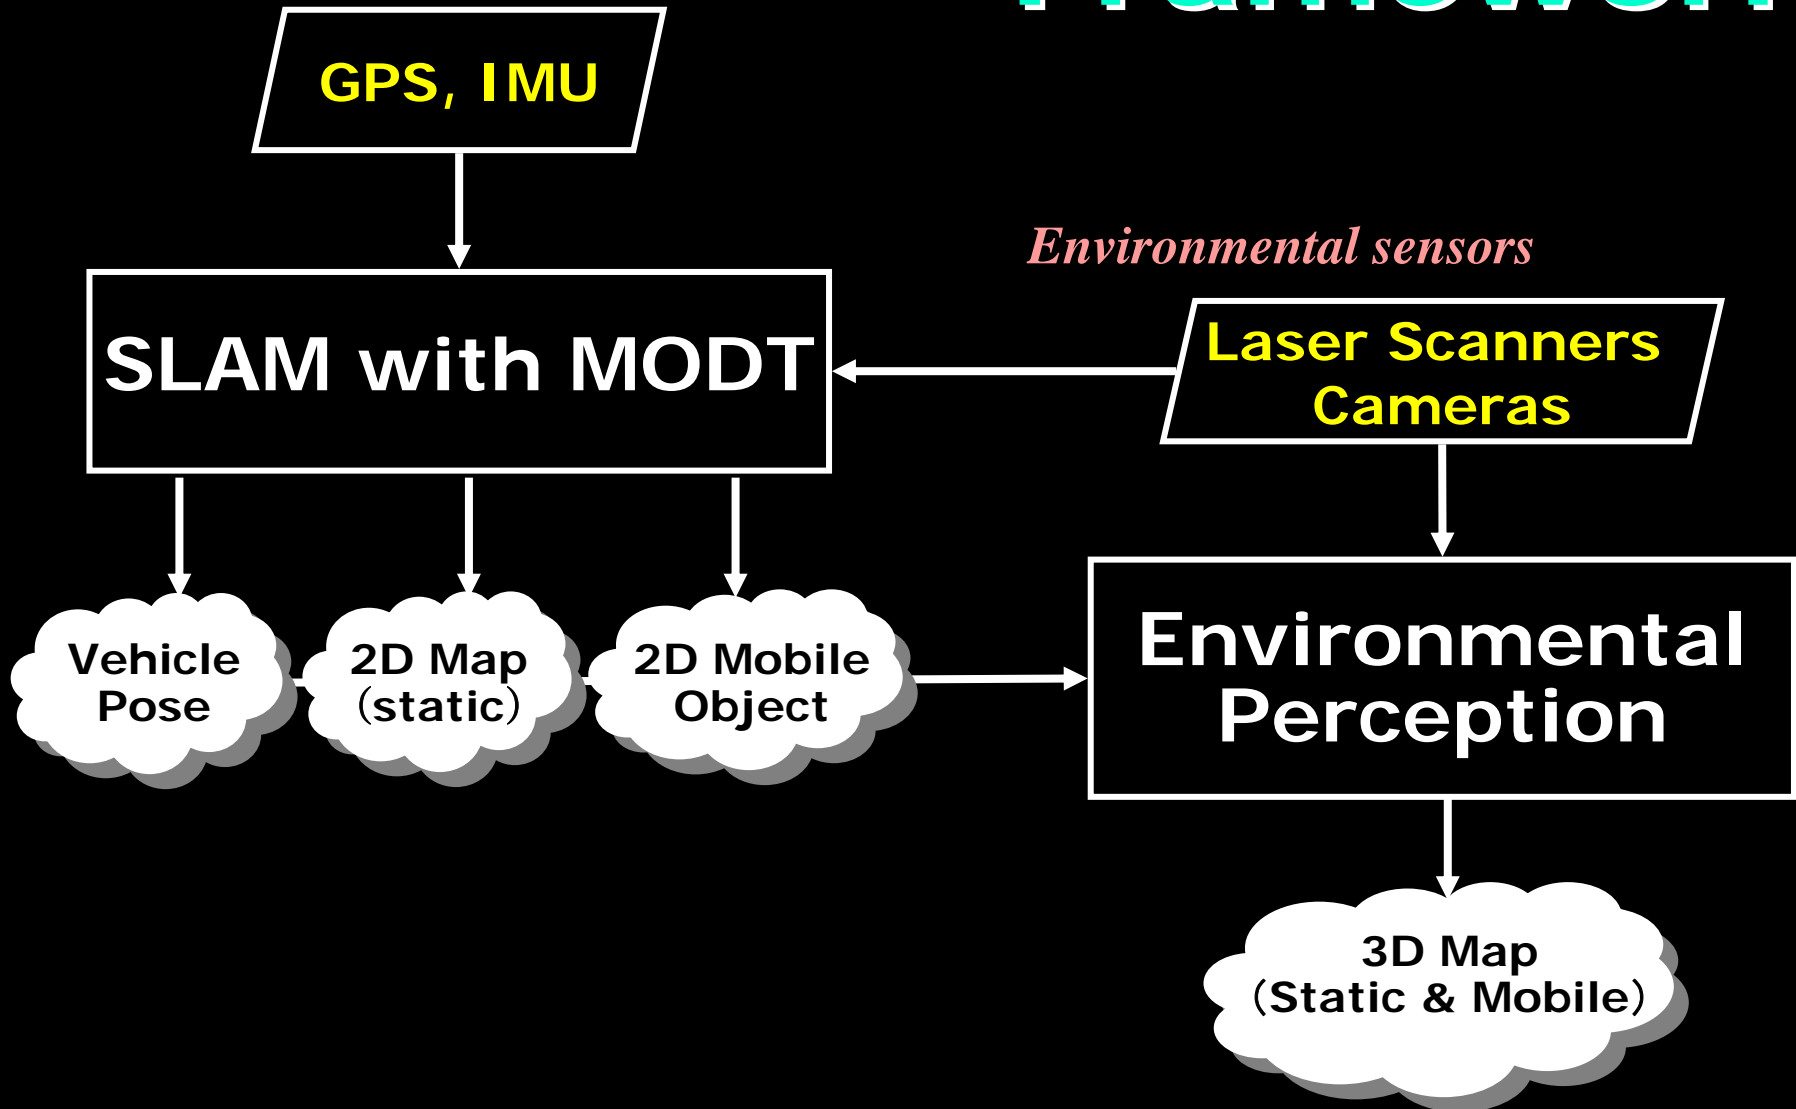

**Vehicle
Pose**

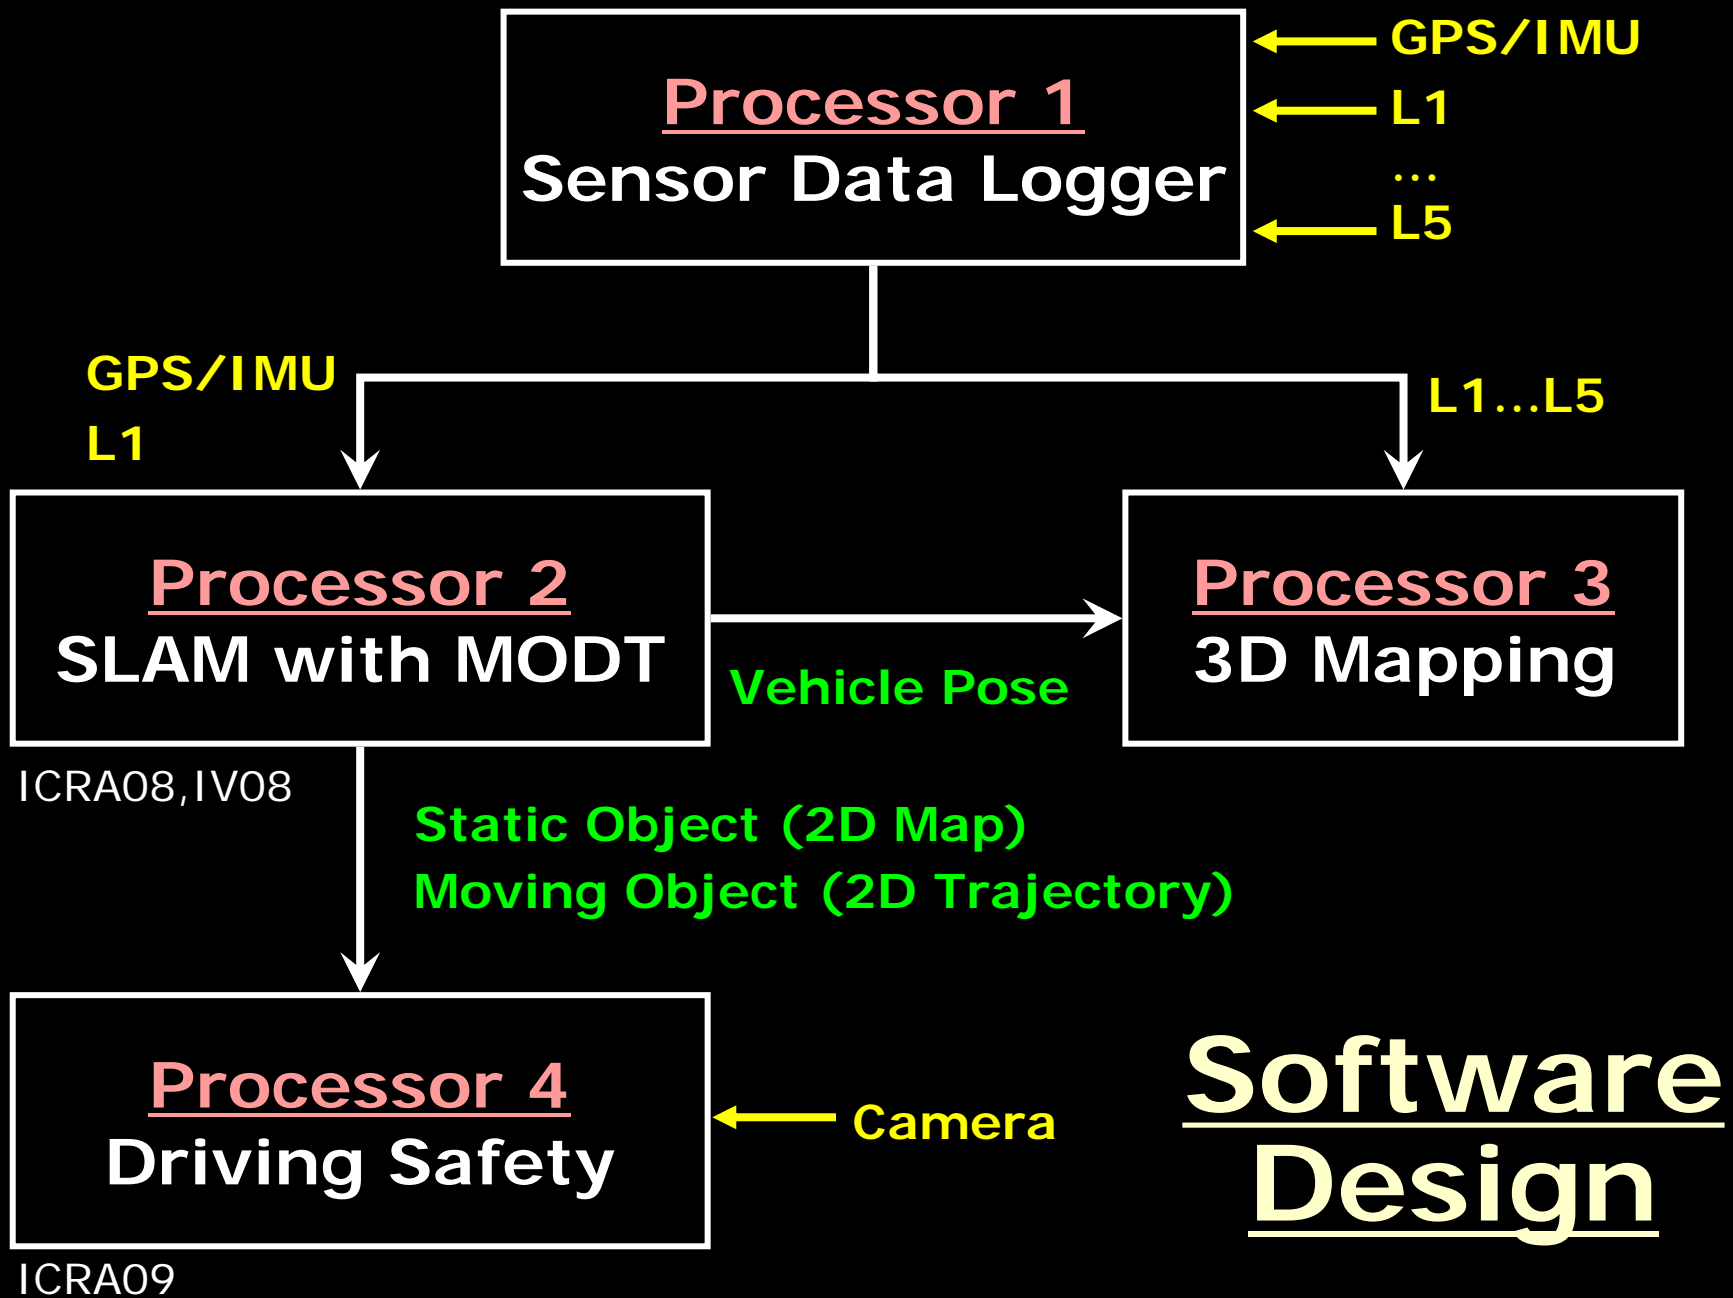

**2D Map
(static)**

**2D Mobile
Object**

**Environmental
Perception**

**3D Map
(Static & Mobile)**

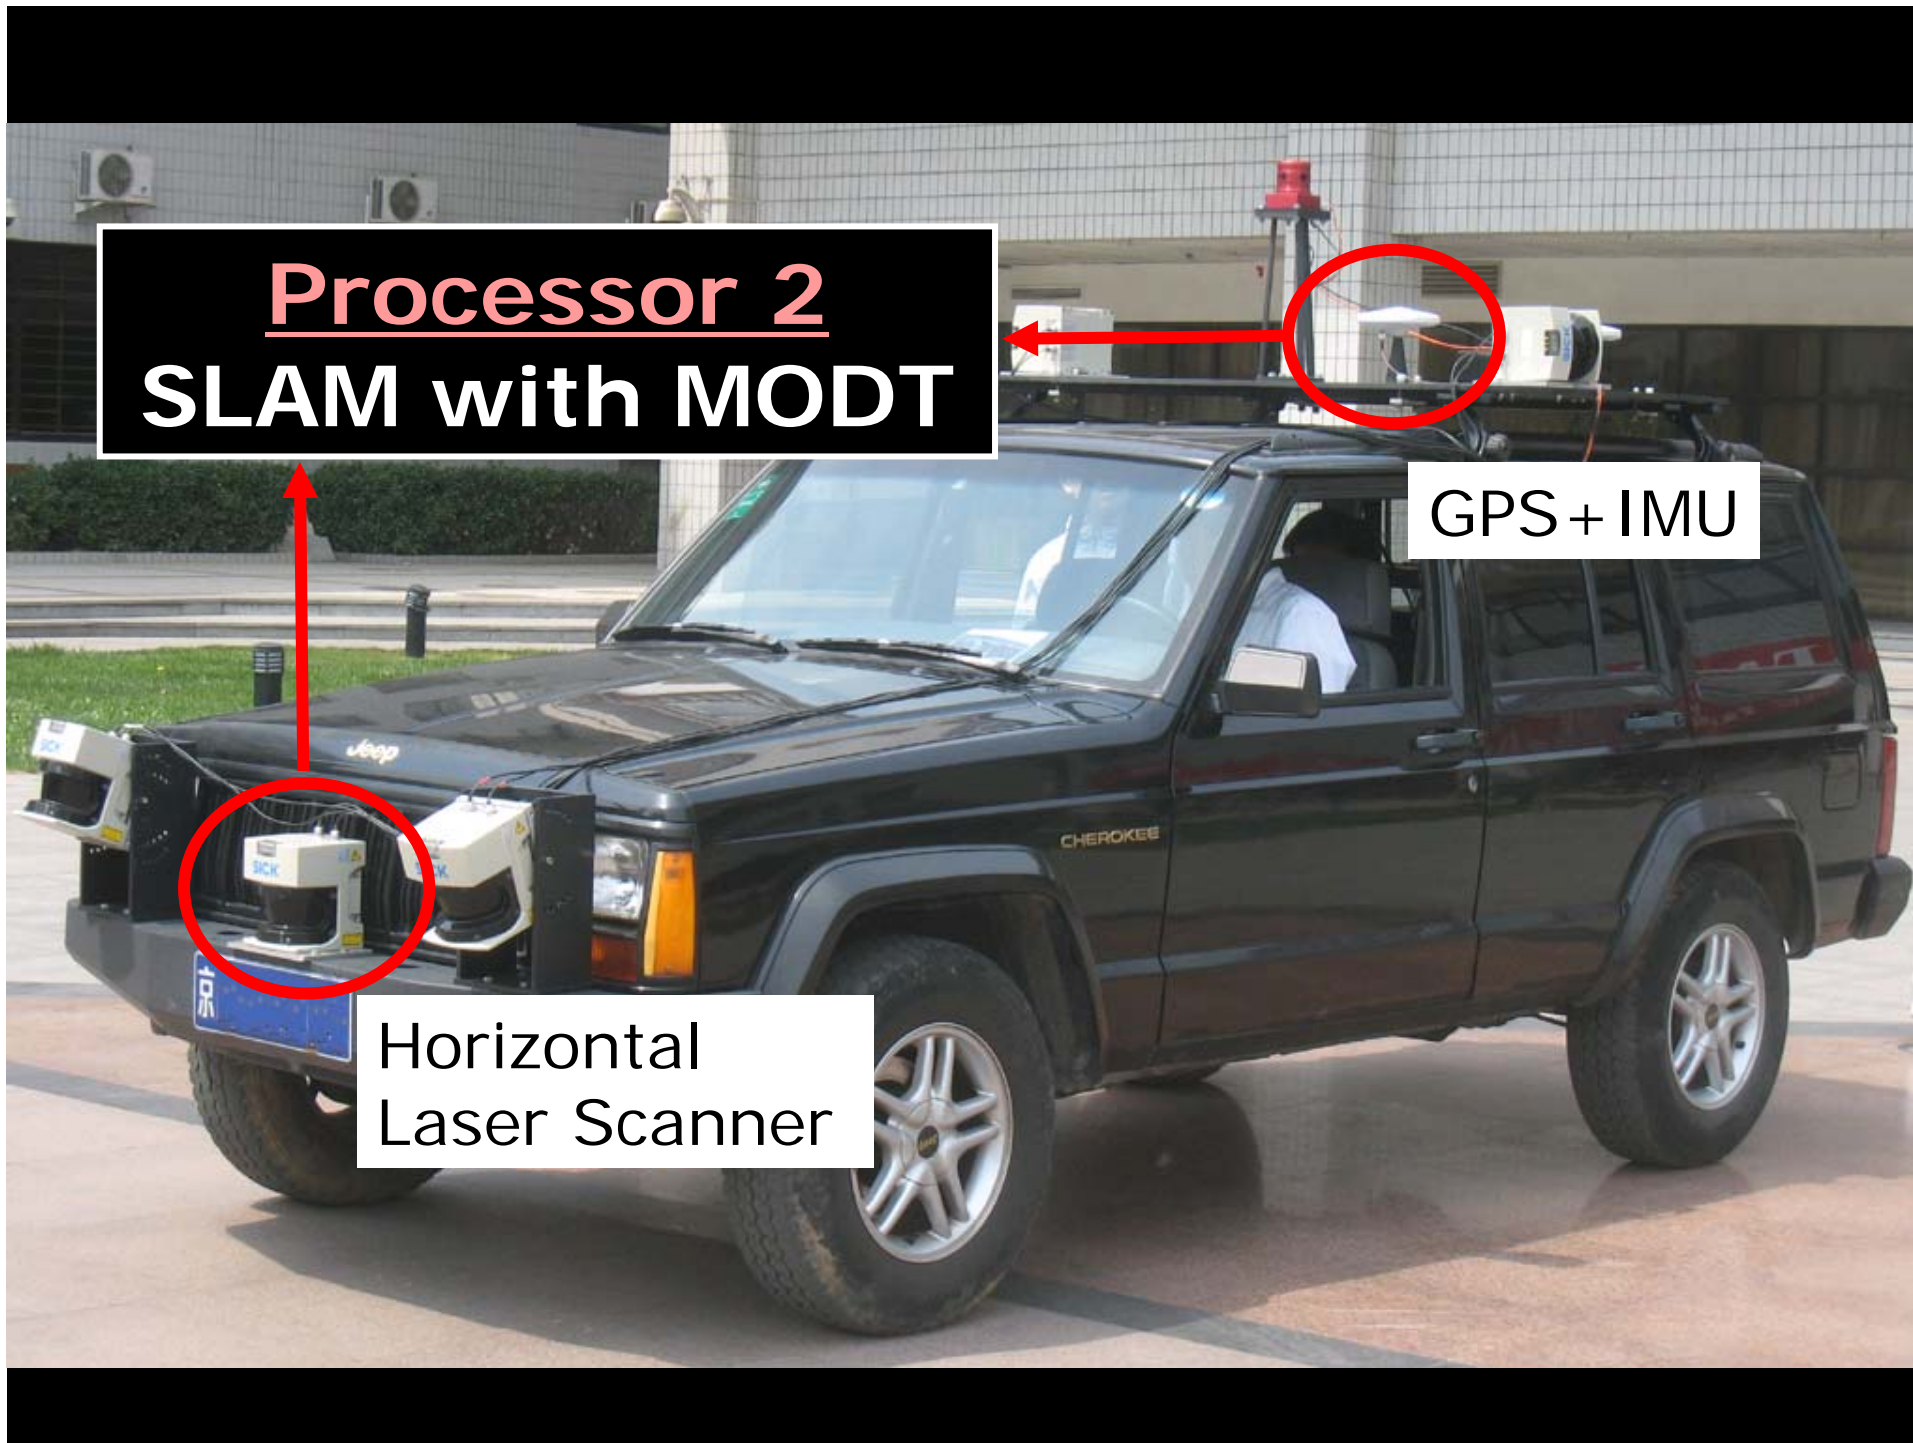

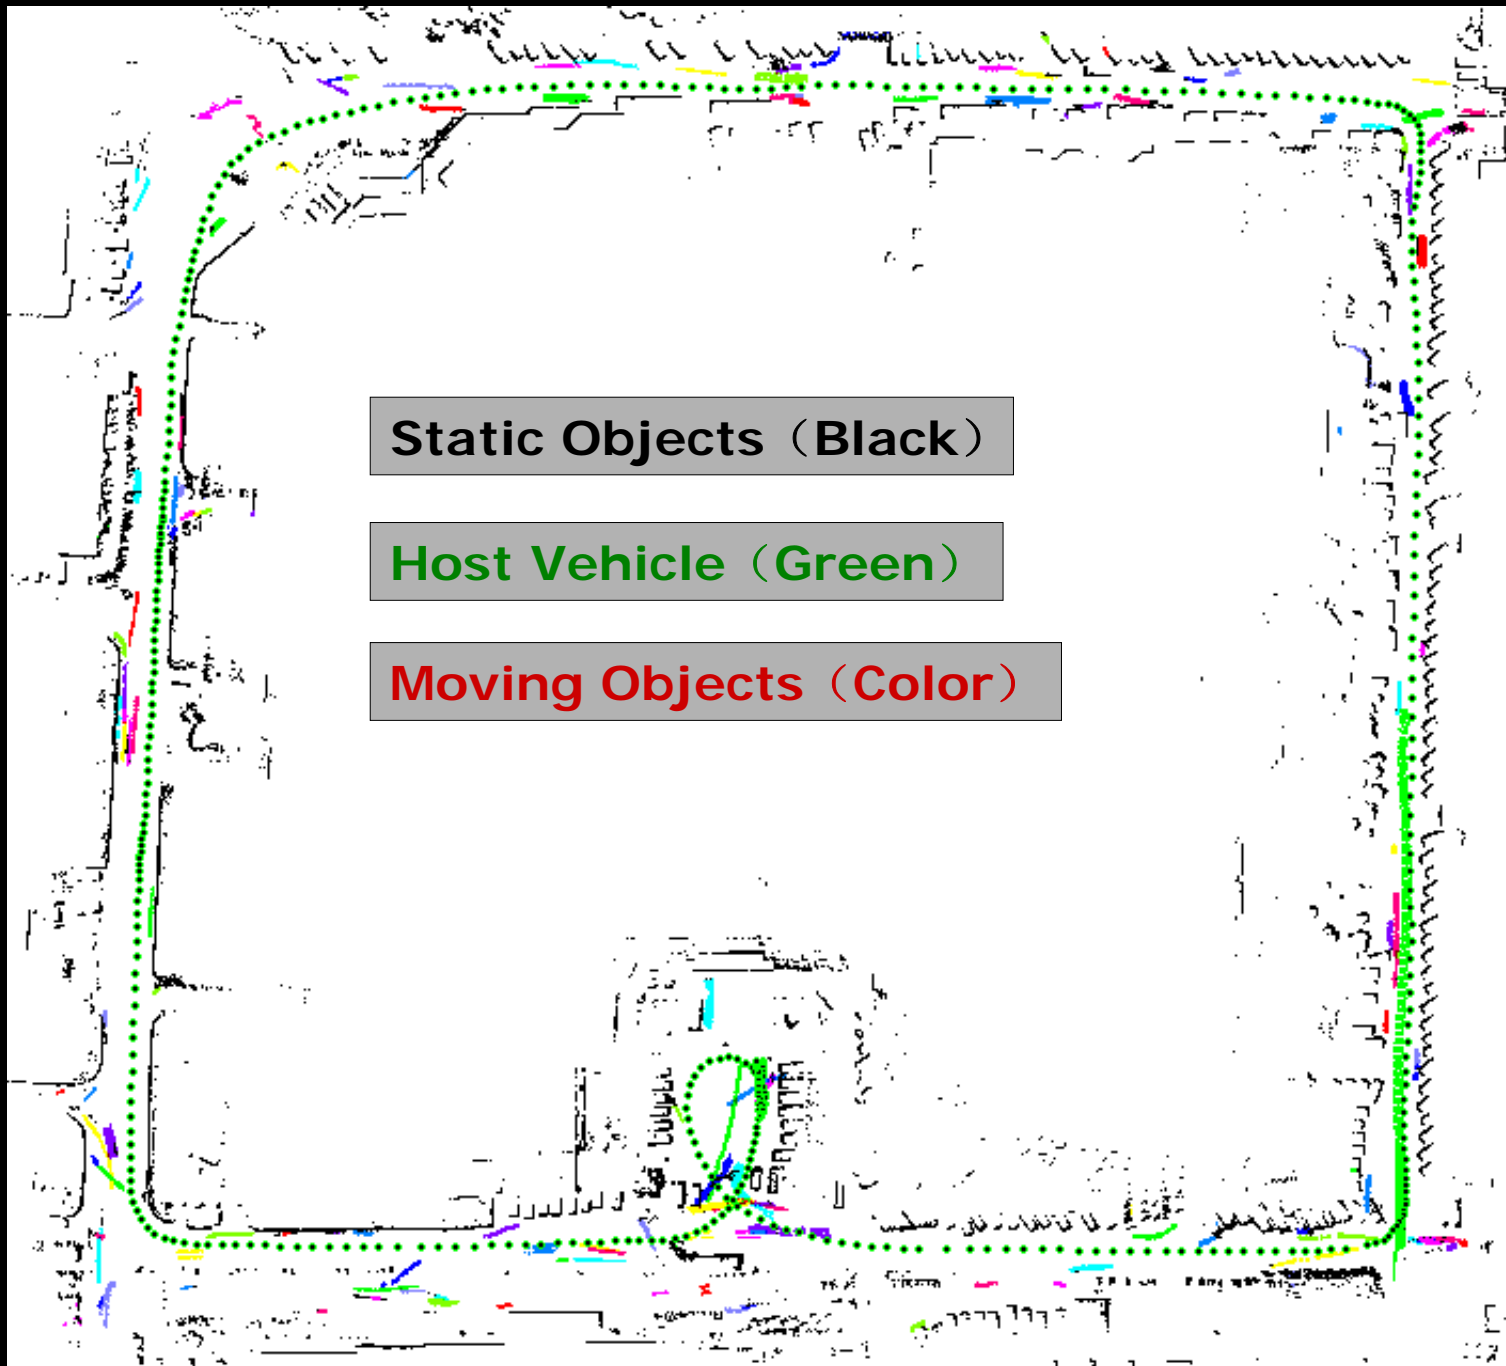

Processor 2
SLAM with MODT

GPS+IMU

Horizontal
Laser Scanner

Static Objects (Black)

Host Vehicle (Green)

Moving Objects (Color)

Fusion with Video

Objects

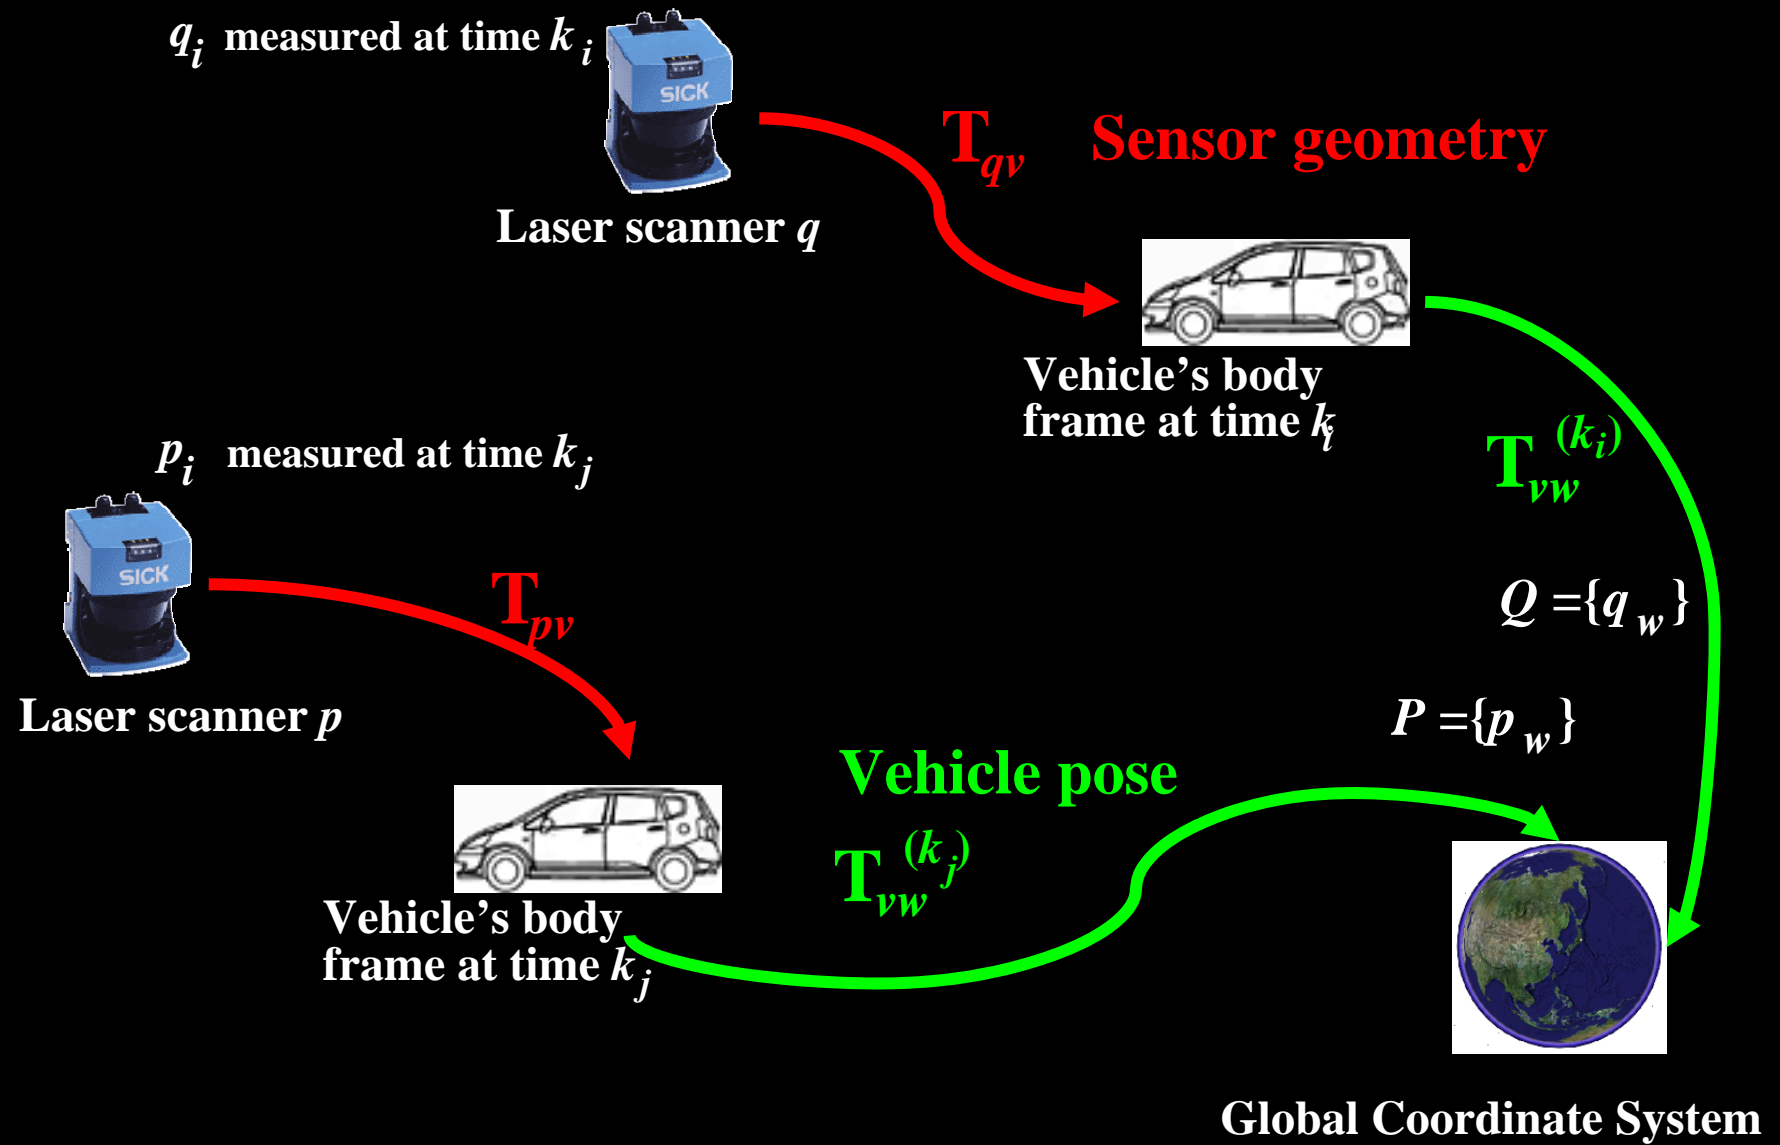

-  person
-  bicycle
-  group
-  car

Laser Points

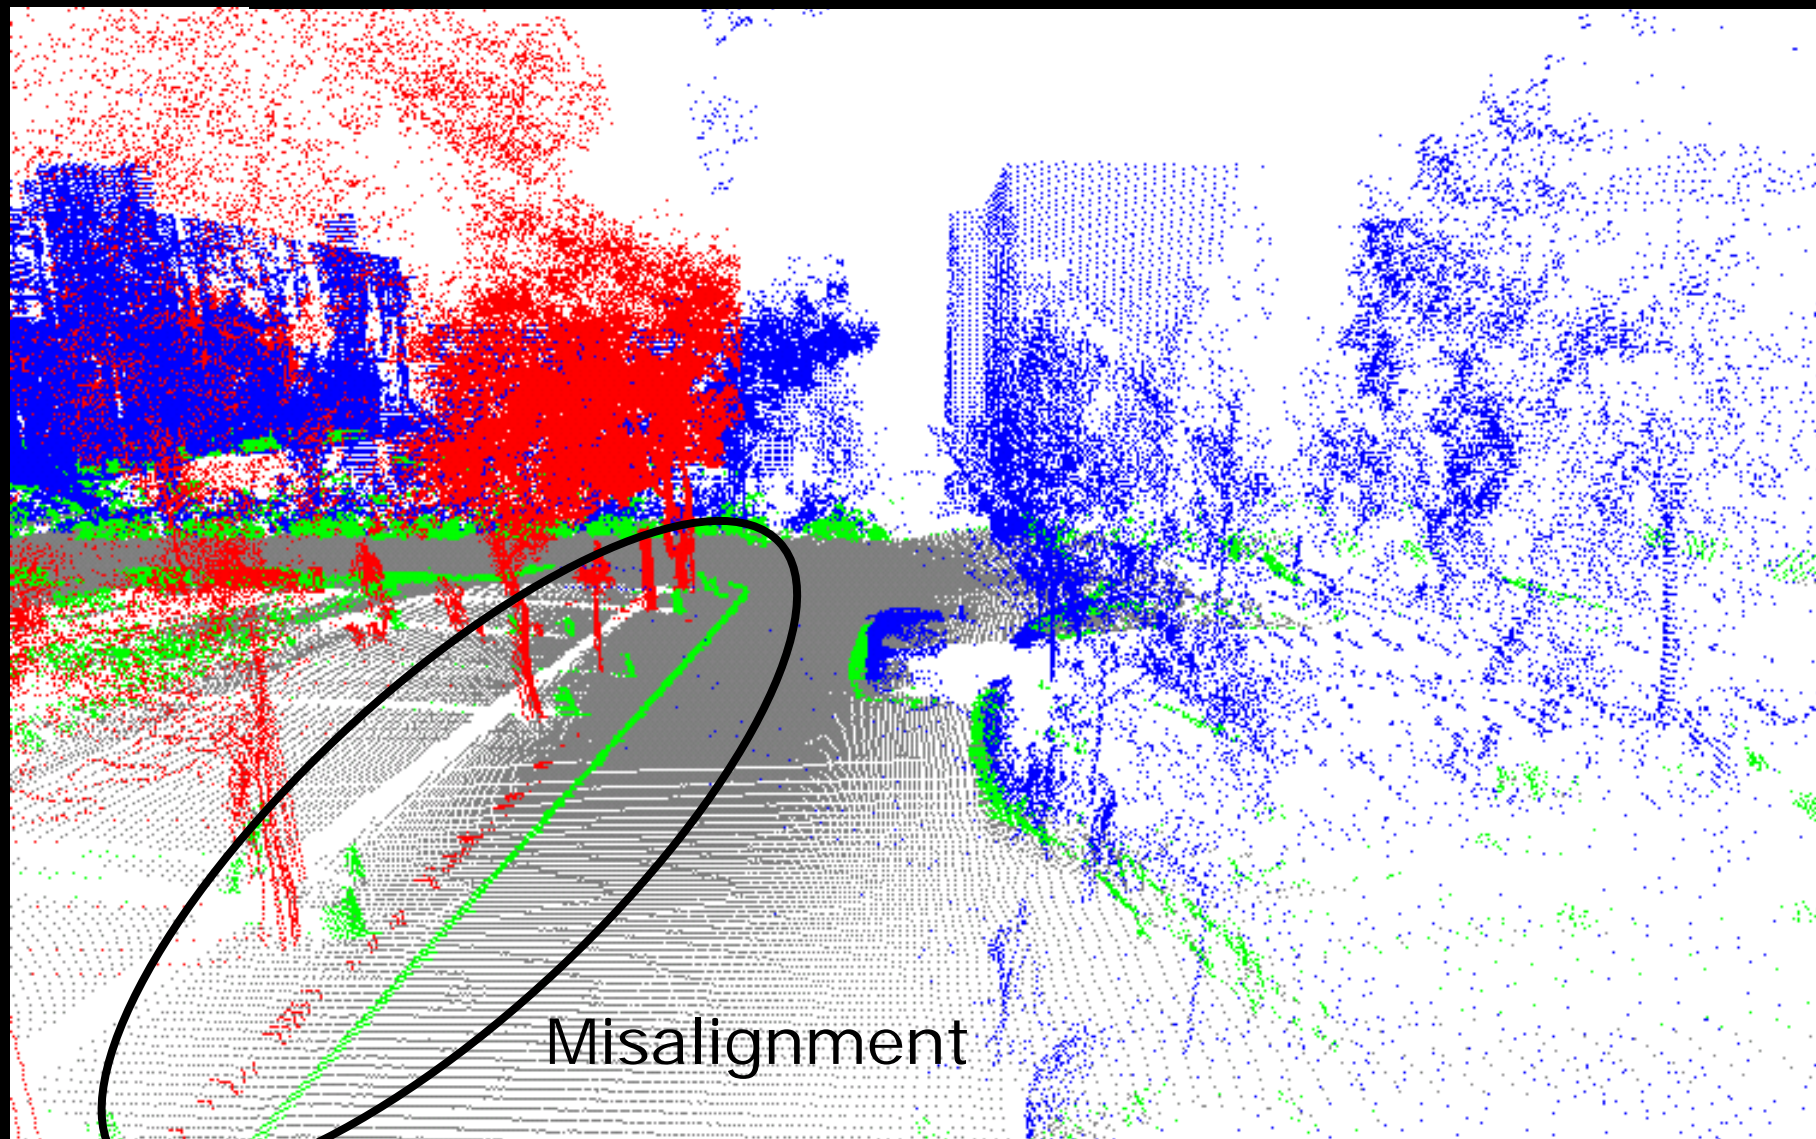

-  moving
-  seed
-  group

**A single object might be measured by different sensors
at different time instance**

IMPOSSIBLE for data association

q_i measured at time k_i
scanner q

user scanner p
measured at time k_j

T_{qv} Sensor geometry

Vehicle's body frame at time k_l

T_{pv}

Vehicle's body frame at time k_j

Vehicle position
 $T_{vw}^{(k_j)}$

POSSIBLE for data association

$\mathcal{Q} = \{q_w\}$

$P = \{p_w\}$

Global Coordinate System

Sensor Calibration

- Sensor geometries are calibrated by minimizing the displacement between geo-referenced data sets of **non-rigid geometry**
- Two sequential steps
 - Horizontal Registration
 - Vertical Registration

Vertical elements

Horizontal registration

Ground data

Vertical registration

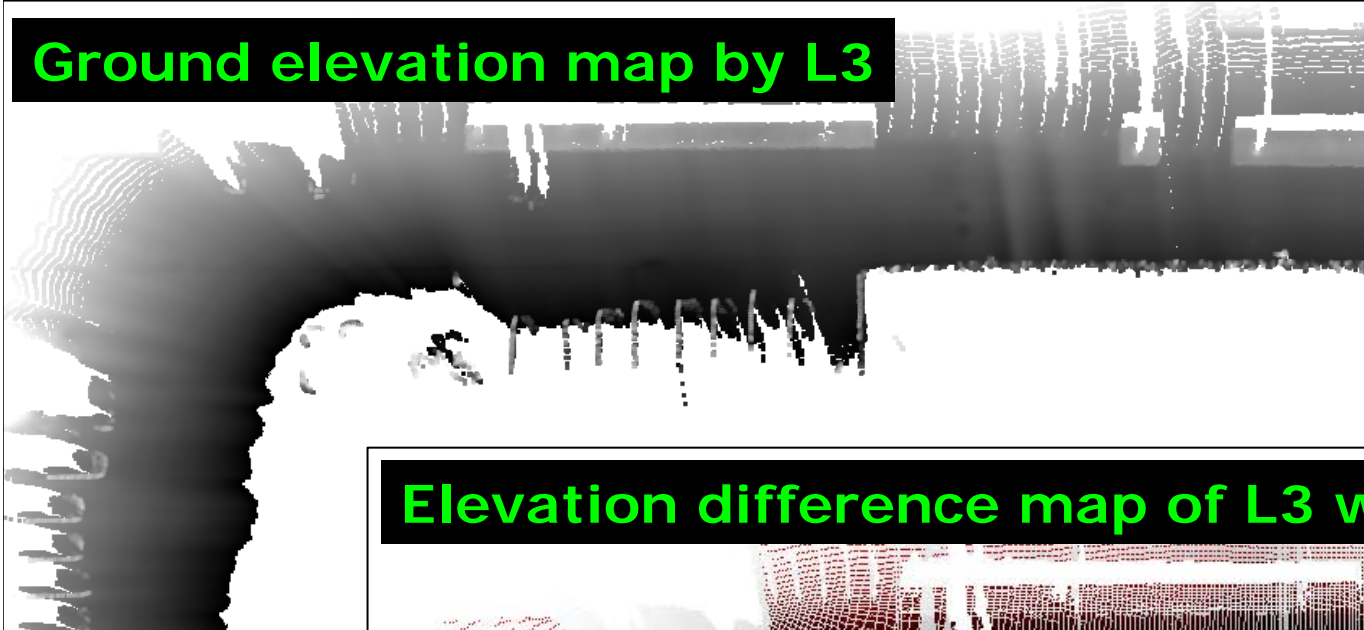

Horizontal Registration

2D map by the SLAM of L1

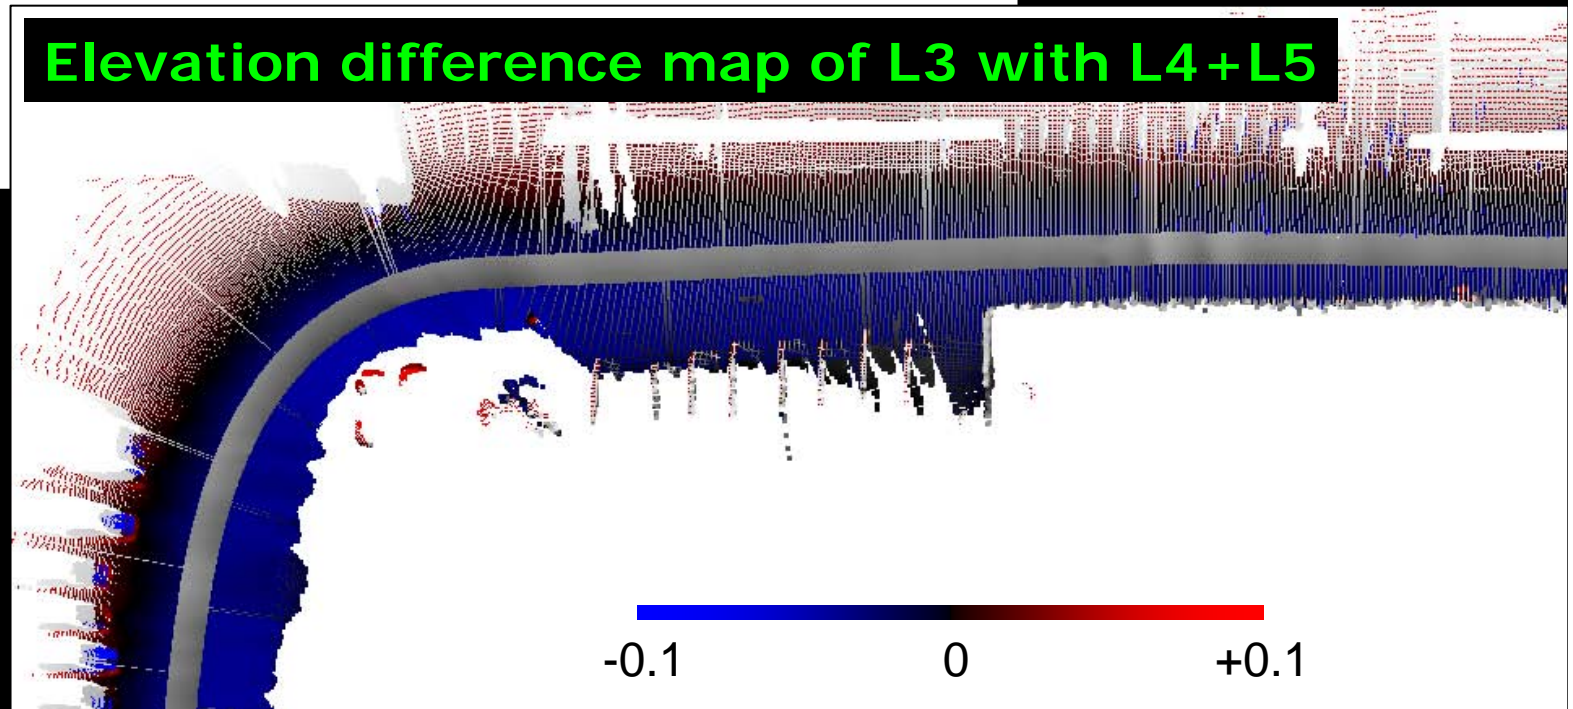

Vertical Registration

Ground elevation map by L3

Elevation difference map of L3 with L4+L5

before

after

Conclusion

- Towards an intelligent vehicle of Omni-directional eyes looking at the environment of both static and dynamic objects.

Welcome to our demonstration!

Thank you !
